Postdoctoral Position at Cincinnati Children’s Hospital Medical Center

The Mersha Lab has an opening for a Research Fellow candidate who will be involved in human genetics project including ancestry (admixture) analysis. The successful applicant will be part of the Population Genetics, Ancestry, and Bioinformatics (pGAB) Laboratory led by Dr. Mersha

Responsibilities:

- Analyze genome wide array as well as clinical and exposure data.
- Maintain large datasets linked to clinical data (e.g. electronic medical record data).
- Communicate progress with PI regularly and contribute to the success of the research team.
- Publish and present research findings in academic journals and conferences.

Requirements:

- Advanced Degree in Statistics, Biostatistics, Genetic Epidemiology, or a related field.
- Outstanding programming skills in R, Python, Java, and Unix shell scripting.
- Excellent track record/interest to analyze genetic epidemiology data. Experience with clinical cohorts a plus.
- Ability to work hard and independently while contributing to the team effort and adhering to deadlines.
- Excellent oral and written communication skills with track record of productive collaborations.
- Demonstrated ability to work concurrently on several projects, and good understanding of analytic complexities to do independent research as well as assist other researchers.

To apply for the position, please contact Tes Mersha, PhD – Tesfaye.Mersha@cchmc.org.
